QUARTERLY RETURN

OF THE

**MARRIAGES, BIRTHS AND DEATHS**

REGISTERED IN

**SAORSTÁT ÉIREANN**

DURING THE QUARTER ENDED 31st MARCH, 1934.

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

*Certain Detailed information relative to the Deaths in Superintendent Registrars' Districts  
and in Urban Districts ; Notifications of certain Infectious Diseases in Urban and Rural areas,  
Persons Vaccinated, &c., &c., &c.*

---

*By Authority of the Registrar-General.*

*Price Sixpence Net.*

[F.S.19).L1204.Wt.65/987.443.3.S.290.6/34. Falconer.

*NOTE.*—The figures given in this Report, being based on unrevised Registrars' Returns and compiled as soon as possible after the close of the Quarter, must be regarded as provisional. Revised figures appear in the Detailed Annual Report.

The Deaths registered in any part of the country are referred to the normal area of residence of deceased. Deaths, if any, of residents of other countries remain in the Districts in which they occur.

The Births registered in each urban area, according to numerical returns furnished by the Registrars, have been partially corrected by the exclusion of those occurring in institutions of infants whose mothers were admitted from other localities. No correction is made in these reports for births in rural areas. In Table IV, as a consequence, there is liability to slight understatement in the births for urban districts, and a corresponding overstatement in those given for the rural districts.

### GENERAL SUMMARY.

The **Marriage-rate** for the first quarter of 1934 was 4.3 per 1,000 of the estimated population. This rate is 0.5 below the average for the corresponding quarter of the five years, 1929-33. The rate for Catholic marriages was 4.5 and for all other marriages 2.5 per 1,000.

In Northern Ireland the marriage rate for the quarter was 4.7 per 1,000; and in Scotland 6.3. In England and Wales the rate for the fourth quarter of 1933 was 8.4 per 1,000.

The **Birth-rate** was 19.3 per 1,000, representing 14,538 births registered. This rate is 0.3 above the average (19.0) for the first quarter of the five years, 1929-33. For Dublin City the birth rate was 27.0; for Dún Laoghaire, 17.5; for Cork, 21.9; for Limerick, 25.7 and for Waterford, 24.2.

The corresponding birth-rate for Northern Ireland during the quarter was 20.0; for England and Wales, 15.0; and for Scotland, 18.7. The birth-rate for Belfast was 23.0; for Londonderry, 26.4; for London, 13.3; for Glasgow, 19.7; and for Edinburgh, 16.6.

The rate in respect of **Deaths** registered (in number 11,634) was 15.4, being 2.5 below the average (17.9) for the first quarter of the preceding five years.

For Dublin City the death-rate was 16.5; for Dún Laoghaire, 19.1; for Cork, 19.7; for Limerick, 17.0; and for Waterford, 15.2.

In Northern Ireland the death-rate for the quarter under review was 15.9 per 1,000; in England and Wales, 14.7; and in Scotland, 14.3. In Belfast the rate was 15.5; in Londonderry, 16.8; in London, 15.8; in Glasgow, 14.8; and in Edinburgh, 14.7.

Deaths from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) afforded an annual rate of 0.5 per 1,000, which is 0.1 below the average for the first quarter of the five years, 1929-33.

The mortality from **Influenza** was equivalent to a rate of 0.4 per 1,000, which is 0.7 below the average for the corresponding quarter of the preceding five years.

The rate for deaths from all forms of **Tuberculous Disease** was 1.2 per 1,000, being 0.2 below the average rate for the first quarter of the five years preceding.

Deaths from **Puerperal Conditions** are represented by a rate of 4.8 per 1,000 births registered, comprising 1.9 for puerperal sepsis and 2.9 for other puerperal conditions, as compared with 1.2 and 4.0 for the first quarter of 1933.

The **Infant Mortality** rate (deaths of infants under one year of age per 1,000 births registered) was 80, in comparison with an average of 83 for the first quarter of the five years, 1929-33.

The **Population** in the middle of 1934 is estimated as 3,014,000 persons (comprising 1,535,000 males and 1,479,000 females) showing an increase of 22,000 on the estimate to the middle of 1933. This increase is derived from the natural increase (excess of births over deaths), and the excess of immigration over emigration.

The **Natural Increase** during the first quarter of 1934 was 2,904, as compared with an average of 766 for the first quarter of the five years, 1929-33.

During the first quarter of 1934, the number of **Emigrants** to places out of Europe and not within the Mediterranean Sea was 193, and the number of **Immigrants** from these places, was 287.

## MARRIAGES.

The marriages registered during the quarter ended 31st March, 1934, numbered 3,244, equivalent to an annual rate of 4·3 per 1,000 of the estimated population, this rate being 0·5 below that for the corresponding quarter of 1933, and also 0·5 below the average for the first quarter of the five years, 1929-33 (See Table I). Of the total marriages 3,106 (or 4·5 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (138) is equivalent to 2·5 per 1,000 of the population other than Catholic. The marriage-rate among Catholics is 0·5 below, and that among other denominations is 0·4 below, the respective rates for the first quarter of the preceding year.

## BIRTHS.

Births registered in the 641 Registrars' Districts into which Saorstát Éireann is divided for registration purposes, amounted to 14,538, of which 7,502 were those of males and 7,036 of females, or 1,066 of the former to 1,000 of the latter.

The birth-rate was 19·3 per 1,000 of the estimated population, being 0·3 above the average (19·0) for the first quarter of the five years, 1929-33 (See Table I).

The birth-rate for **Urban Districts** (including the cities or boroughs) was 24·7, and for **Rural Districts**, 17·0, as compared with 23·3 and 16·3, respectively, in the first quarter of 1933 (See Table IV).

For the **Twelve Principal Towns**, the birth-rate was 25·6, as against 24·4 in the corresponding quarter of 1933.

Amongst these towns, the rates varied from 31·5 for Sligo, 31·2 for Galway, and 28·0 for Drogheda to 15·6 for Tralee, 17·5 for Dún Laoghaire, and 21·7 for Dundalk.

## DEATHS.

The number of deaths registered during the quarter was 11,634, and of these 5,911 were deaths of males and 5,723 of females. For all persons the equivalent annual rate was 15·4 per 1,000 of the estimated population, being 2·5 below the average for the first quarter of the preceding quinquennial period, and 1·9 below the rate for the first quarter of the year 1933 (See Table I).

For the **Urban Districts** in the aggregate, the death-rate was 16·8, as compared with 19·4 in the first quarter of 1933, and for **Rural Districts**, 14·9, in comparison with 16·4 for the corresponding period of the year 1933.

The annual rate represented by deaths from all causes for the **Twelve Principal Towns** in the aggregate was 17·1, as compared with 20·1 in the first quarter of 1933.

The rate for each of these towns is as follows, ranging in order from that with the lowest rate to that with the highest—Tralee 11·8, Dundalk 14·6, Waterford 15·2, Wexford 16·2, Dublin 16·5, Limerick 17·0, Drogheda 17·9, Sligo 18·5, Dún Laoghaire 19·1, Cork 19·7, Galway 20·5, and Kilkenny 22·3.

## Causes of Death.

Table II shows the mortality from some of the principal causes for the first quarter of 1934 and for each quarter of the preceding five years, as well as the averages for each quarter of these years.

**Principal Epidemic Diseases.**—From this Table it will be seen that the number of deaths (401) from this group of causes is 17 below that for the first quarter of 1933, and 29 below the average for the first quarter of the five years 1929-33. Increases are shown in typhoid fever, scarlet fever, whooping-cough, and diphtheria, in comparison with the average for the previous five years. The increase in typhoid fever was 7, in scarlet fever 4, in whooping-cough 23, and in diphtheria 18 when compared with the average. Decreases have occurred in measles, and diarrhoea and enteritis of children under 2 years of age, amounting to 72 and 8 respectively.

Deaths from diarrhoea and enteritis of children under 2 years, numbered 109; of these 59 (or 10·7 per 1,000 births) were recorded for urban areas, as against 50 (or 5·6 per 1,000 births) for rural areas. For urban areas of 10,000 population and upwards ("Twelve Principal Towns"), the mortality was 11·6 per 1,000 births, as compared with 7·1 per 1,000 for urban districts with less than 10,000 inhabitants.

Table III shows that the mortality from the principal epidemic diseases in the Counties and Cities varied from 0·1 per 1,000 of the population for Counties Longford, Mayo, and Donegal, to 1·4 for Cork County Borough.

The death-rate from these diseases for the twelve principal towns in the aggregate, was 0·9, and the rates varied between 0·0 for Wexford and 1·9 for Drogheda; the 57 deaths from all causes for the latter area included one from scarlet fever, 3 from whooping-cough, and 2 from diarrhoea and enteritis of children under 2 years (Table IV).

**Influenza.**—Deaths from influenza numbered 286, representing an annual rate of 0·4 per 1,000. The average number for the first quarter of the preceding five years was 779, with a rate of 1·1. Of the deaths in the quarter under review, 41 appertained to urban areas, and 245 to rural districts; the corresponding numbers for the first quarter of 1933 were 324 and 783.

**Tuberculosis.**—The number of deaths from all forms of this disease during the quarter was 905, equivalent to an annual rate of 1·2 per 1,000 of the population, as compared with an average of 1,043, and a rate of 1·4 for the first quarter of the five years, 1929-33. As may be seen from Table III, the rates varied from 1·9 for each of the City of Dublin and Kildare County, 1·7 for Westmeath and Wicklow, and 1·6 for City of Cork, to 0·7 for Kilkenny, Longford, Tipperary N.R., and Roscommon. The rate for the aggregate city or borough areas and urban districts was 1·7 per 1,000 of the population of these areas, as compared with 1·0 for rural areas. For the twelve principal town areas it was 1·7, and for the urban districts under 10,000 population the rate was 1·5.

**Puerperal Conditions.**—The number of deaths ascribed to accidents and diseases of pregnancy and childbirth, was 70, being equal to 4·8 per 1,000 births registered. Of the 70 deaths, 27 were due to puerperal sepsis, or 1·9 per 1,000 births, and 43, or 2·9 per 1,000 births, to other puerperal conditions. The corresponding rates for the first quarter of 1933 were 1·2 and 4·0 respectively.

#### **Ages at Death.**

Of the total deaths at all ages registered during the quarter, 1,157 or 9·9 per cent. were those of infants under one year of age, and 5,368, or 46·1 per cent. were those of persons 65 years and upwards.

**Infant Mortality.**—The infant mortality rate was 80 per 1,000 births registered, as compared with 59, 55 and 68 respectively, for the three preceding quarters, and an average of 83 for the first quarter of the five years preceding (Table I).

For county boroughs and urban districts in the aggregate, the rate was 102, and for all rural districts 66 per 1,000 births (Table III).

#### **Deaths in Public Institutions.**

Deaths in Institutions numbered 3,328, or 28·7 per cent. of all deaths registered.

#### **Inquests.**

There were 333 inquests or deaths registered on Coroners' Certificates during the quarter, this number being 2·9 per cent. of the total deaths registered.

#### **Uncertified Deaths.**

The number of entries in which the cause of death was not stated to have been certified by a medical practitioner was 2,141, or 18·4 per cent. of the total deaths.

#### **Cases of Infectious Diseases Notified.**

Table VI gives the number of such cases notified during the quarter in urban and rural districts. The total number amounted to 2,623.

#### **Vaccination.**

As returned by the Registrars, the number of successful primary vaccinations during the quarter ended 31st March last was 5,508, or 37·9 per cent. of the births registered during the quarter, the corresponding ratio for the first quarter of the five years 1929-33 being 40·7.

# CITY OF DUBLIN.

## BIRTHS.

Exclusive of 332 births in institutions relating to residents of other localities, the number of births recorded for the City of Dublin during the quarter under review was 2,863. The annual rate represented thereby was 27·0 per 1,000 of the estimated population, as compared with a rate of 25·2 for the corresponding quarter of 1933. The total births registered (3,195) comprise 1,664 boys and 1,531 girls.

## DEATHS.

Omitting 227 deaths registered in the city relating to other localities, and including those of persons usually resident in the city who died elsewhere in Saorstát Eireann, the deaths for Dublin during the quarter numbered 1,752, equivalent to an annual rate of 16·5 per 1,000 of the population, as compared with 20·8 for the first quarter of 1933. The total number of deaths registered in the city was 1,935—1,005 males and 930 females.

## Causes of Death.

The following statement shows the number of deaths from some of the principal causes for the first quarter of 1934, as compared with 1933 :—

| CITY OF DUBLIN              |  |                     |
|-----------------------------|--|---------------------|
| CAUSE OF DEATH              |  | First Quarter, 1934 |

| Principal Epidemic Diseases | Typhoid fever ...                                  | 2                   |
|                             | Typhus „ ...                                       | 3                   |
|                             | Small-pox ...                                      | ·                   |
|                             | Measles... ..                                      | 48                  |
|                             | Scarlet fever ...                                  | 7                   |
|                             | Whooping-cough ...                                 | 11                  |
|                             | Diphtheria ...                                     | 30                  |
|                             | Dysentery ...                                      | ·                   |
|                             | Diarrhoea and enteritis (children under 2 years) } | 22                  |
|                             | Influenza ...                                      | 166                 |
| Pulmonary tuberculosis ...  |  | 175                 |
| Other forms „ ...           |  | 35                  |

When compared with the figures for the first quarter of 1933 the number of deaths from each of whooping-cough and diphtheria shows an increase. There were no deaths from measles during the period. Decreases are also shown in the number of deaths from typhoid fever and scarlet fever. The deaths from influenza numbered 10, compared with 166 for the first quarter of 1933.

**Principal Epidemic Diseases.**—The deaths from this group of causes numbered 94, affording an annual rate of 0·9, as compared with 1·2 for the first quarter of the preceding year.

**Tuberculosis.**—The deaths from all forms of tuberculous disease recorded for the city numbered 200, representing an annual rate of 1·89, as compared with 2·00 for the first quarter of the preceding year.

Of the 200 deaths, 166 were ascribed to pulmonary and 34 to other forms of the disease, the former representing a rate of 1·57 per 1,000, and the latter 0·32 per 1,000.

## Ages at Death.

Of the 1,752 deaths relating to the City of Dublin, registered during the quarter, 419 (or 24·2 per cent.) were those of children under five years of age, and 503 (or 29·1 per cent.) were of persons 65 years of age or upwards, the corresponding percentages in respect of the first quarter of 1933 being 21·8 and 32·7.

## Infant Mortality.

There were 299 deaths of infants under one year of age for the city, equivalent to a rate of 104 per 1,000 births. In the first quarter of 1933 the rate was 101.

## Deaths in Public Institutions.

The deaths of Dublin residents occurring in public institutions, registered during the quarter, numbered 881, or 50·9 per cent. of the total deaths.

## Cases of Infectious Disease.

The number of cases of infectious disease notified during the quarter, as shown in Table VI, was 529. Table VII gives the number of cases under treatment in Dublin hospitals during the quarter.

**METEOROLOGY.**

The mean temperature for the thirteen weeks ended 31st March, 1934, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was  $42.1^{\circ}$ , at Cork (Roche's Point) it was  $44.2^{\circ}$ ; at Peamount Sanatorium  $40.9^{\circ}$ ; at Greenwich  $40.2^{\circ}$ ; at Glasgow\*  $41.4^{\circ}$ , and at Edinburgh  $41.1^{\circ}$ .

The mean daily number of hours of bright sunshine recorded for the period at Dublin was 3.0; at Cork (Ballinacurra), 2.8; at Peamount Sanatorium, 3.6; at Greenwich, 2.0; at Glasgow,\* 2.0; and at Edinburgh, 3.1.

The rainfall during the same period measured at Dublin 4.49 inches; at Cork (Roche's Point), 8.50 inches; at Peamount Sanatorium, 3.94 inches; at Greenwich, 3.74 inches; at Glasgow,\* 7.15 inches; and at Edinburgh, 4.81 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London—

**January.**

The weather of January was rather mild and unsettled with winds mainly from between south and west. Strong winds occurred frequently and gales were reported on 11 days at Malin Head, and on 7 days at Waterford and Blacksod Point. A gust of 94 m.p.h. was recorded at Dunfanaghy on the 17th and one of 74 m.p.h. at Cork on the 15th.

Mean temperature was above the average for the period 1901-30, the excess being greatest ( $2.1^{\circ}$  F.) at Trinity College, Dublin. The warmest days occurred as a rule around the 6th, 10th and 17th, temperature rising to  $57^{\circ}$  F. at Trinity College on the 10th and to  $56^{\circ}$  F. at Cork on the 17th and at Hazelhatch on the 18th.

Rainfall, on the whole, exceeded the normal (1881-1915) except in the south-east and amounted to as much as 163 per cent. of the average at Castle Forbes (Longford) and 157 per cent. at Birr Castle.

Sunshine aggregates generally exceeded the average (1901-30) and among sunny days may be mentioned the 6th, 18th, 19th, 26th and 29th; (7.1 hours were recorded at Dublin on the 19th and at Valentia on the 26th).

**February.**

The outstanding feature of the weather of February was the exceptional deficiency of rainfall. Over Ireland as a whole, the percentage of the normal for the period 1881-1915 was 11 and the month ranks as one of the driest Februaries on record. February, 1932, was drier, but, apart from that, it is necessary to go back to 1891 to find another which was equally dry. Less than 1 mm. fell at Dublin City, at Trinity College, Dublin, and at Newcastle, Wicklow. Mean temperature was below the average for the period 1901-30 in southern districts and above in the north, the deviation ranging from  $-2.3^{\circ}$  F. at Waterford to  $+1.8^{\circ}$  F. at Malin Head. As a rule sunshine was in excess of the average (1901-30), though a few stations showed a deficiency. At Valentia the excess amounted to 27 hours and at Mallarany to nearly 18 hours.

**March.**

In strong contrast to February, the weather of March was unsettled and wet. Rainfall everywhere exceeded the normal for the period 1881-1915 and more than 150 per cent. of the normal fell locally in Kerry and Cork. The wettest days were generally the 9th, 14th and 16th and among the heavier falls in 24 hours are included 29 mm. at Ballinacurra and 26 mm. at Cork on the 9th and 25 mm. at Valentia on the 14th. Mean temperature was generally below the average for the month but a warm spell was experienced around the 24th and 25th, and  $61^{\circ}$  F. was registered at Newcastle, Wicklow, on the 24th. The lowest temperature recorded was  $25^{\circ}$  F. at Markree Castle on the 14th and 29th. On the whole sunshine differed little from the average. Among good daily records may be mentioned 10.8 hours at Seskin, Carrick-on-Suir, on the 29th, 11.0 hours at Trinity College, Dublin, on the 27th and 11.1 hours at Hazelhatch on the 28th.

\*For twelve weeks.

Dublin, for the Thirteen Weeks ended March 31st, 1934.

| WEEK ENDED     | AIR PRESSURE                    |                         | TEMPERATURE |            |                 |                                    |         |        |                  | HYGROMETER       |               |                   | BRIGHT SUNSHINE                    |                        | RAINFALL*    |                                    | WIND           |                        |

\* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1934; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

[illegible]

D. 11. Densities of Dun Lochoise are calculated on the estimated populations in the middle of 1934.

• The rates for Saorstát Éireann, the City of Dublin and the Borough of Dun Laoghaire are calculated on the basis of the rates for the City of Dublin and the Borough of Dun Laoghaire.

**TABLE V.—Showing for the Quarter (13 weeks) ended 31st March, 1934, the mortality from All Causes and from some of the Principal Causes of residents of the several REGISTRARS' DISTRICTS in the CITIES OF DUBLIN and Cork.\* also the Deaths at certain age periods, and the number of Uncertified Deaths.**

NOTE: This Table is a summary of the Weekly Returns and is not comparable with the figures shown in Table IV.—Correction is made for Deaths of DUBLIN and CORK CITY residents occurring in institutions situated within their boundaries, as well as in institutions situated in adjacent rural areas and in other towns of 10,000 inhabitants or upwards. See Note on second page.

1934]. LE h-AGHAIDH NA SEIBHÍSE PUIBLÍ.  
2nd Quarter.

[No. 282.]

CÚNNTAS RÁITHEAMHAIL NA bPÓSADH, NA mBREITH, AGUS  
NA mBÁS I SAORSTÁT ÉIREANN.

---

QUARTERLY RETURN

The Royal Sanitary Institute  
OF THE  
Library.

MARRIAGES, BIRTHS AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN

DURING THE QUARTER ENDED 30th JUNE, 1934.

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

*Certain Detailed information relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts ; Notifications of certain Infectious Diseases in Urban and Rural areas  
Persons Vaccinated, &c., &c., &c.*

---

*By Authority of the Registrar-General.*

---

To be purchased directly from the  
GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN, C2,  
or through any Bookseller.

---

*Price Sixpence Net.*

*NOTE.—The figures given in this Report, being based on unrevised Registrars' Returns and compiled as soon as possible after the close of the Quarter, must be regarded as provisional. Revised figures appear in the Detailed Annual Report.*

*The Deaths registered in any part of the country are referred to the normal area of residence of deceased. Deaths, if any, of residents of other countries remain in the Districts in which they occur.*

*The Births registered in each urban area, according to numerical returns furnished by the Registrars, have been partially corrected by the exclusion of those occurring in institutions of infants whose mothers were admitted from other localities. No correction is made in these reports for births in rural areas. In Table IV, as a consequence, there is liability to slight understatement in the births for urban districts, and a corresponding overstatement in those given for the rural districts.*

### GENERAL SUMMARY.

The **Marriage-rate** for the second quarter of 1934 was 4·7 per 1,000 of the estimated population. This rate is 0·3 above the average for the corresponding quarter of the five years, 1929-33. The rate for Catholic marriages was 4·8 and for all other marriages 3·4 per 1,000.

In Northern Ireland the marriage-rate for the quarter was 6·2 per 1,000; and in Scotland 7·2. In England and Wales the rate for the quarter was 8·4 per 1,000.

The **Birth-rate** was 19·9 per 1,000, representing 14,999 births registered. This rate is 0·5 below the average (20·4) for the second quarter of the five years, 1929-33. For Dublin City the birth-rate was 27·5; for Dún Laoghaire, 17·2; for Cork, 25·9; for Limerick, 25·2; and for Waterford, 25·7.

The corresponding birth-rate for Northern Ireland during the quarter was 21·5; for England and Wales, 15·6; and for Scotland, 18·9. The birth-rate for Belfast was 23·8; for Londonderry, 28·8; for London, 14·1; for Glasgow, 20·7; and for Edinburgh, 16·3.

The rate in respect of **Deaths** registered (in number 10,029) was 13·3, being 1·3 below the average (14·6) for the second quarter of the preceding five years.

For Dublin City the death-rate was 13·5; for Dún Laoghaire, 14·4; for Cork, 14·2; for Limerick, 12·7; and for Waterford, 12·9.

In Northern Ireland the death-rate for the quarter under review was 14·4 per 1,000; in England and Wales, 11·8; and in Scotland, 13·6. In Belfast the rate was 14·6; in Londonderry, 20·6; in London, 11·4; in Glasgow, 15·3; and in Edinburgh, 12·9.

Deaths from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) afforded an annual rate of 0·4 per 1,000, which is 0·1 below the average for the second quarter of the five years, 1929-33.

The mortality from **Influenza** was equivalent to a rate of 0·3 per 1,000, which is 0·3 below the average for the corresponding quarter of the preceding five years.

The rate for deaths from all forms of **Tuberculous Disease** was 1·4 per 1,000, being the same as the average rate for the second quarter of the five years preceding.

Deaths from **Puerperal Conditions** are represented by a rate of 5·3 per 1,000 births registered, comprising 2·3 for puerperal sepsis and 3·0 for other puerperal conditions, as compared with 0·9 and 2·8 for the second quarter of 1933.

The **Infant Mortality** rate (deaths of infants under one year of age per 1,000 births registered) was 58, in comparison with an average of 67 for the second quarter of the five years, 1929-33.

The **Population** in the middle of 1934 is estimated as 3,013,000 persons (comprising 1,535,000 males and 1,478,000 females) showing an increase of 21,000 on the estimate to the middle of 1933. This increase is derived from the natural increase (excess of births over deaths), and the excess of immigration over emigration.

The **Natural Increase** during the second quarter of 1934 was 4,970, as compared with an average of 4,331 for the second quarter of the five years, 1929-33.

During the second quarter of 1934, the number of **Emigrants** to places out of Europe and not within the Mediterranean Sea was 332, and the number of **Immigrants** from these places was 669.

## MARRIAGES.

The marriages registered during the quarter ended 30th June, 1934, numbered 3,548, equivalent to an annual rate of 4·7 per 1,000 of the estimated population, this rate being 0·1 above that for the corresponding quarter of 1933, and 0·3 above the average for the second quarter of the five years, 1929-33 (See Table I). Of the total marriages 3,360 (or 4·8 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (188) is equivalent to 3·4 per 1,000 of the population other than Catholic. The rate for Catholic marriages is 0·2 above and that for other marriages is 0·8 below, the respective rates for the second quarter of the preceding year.

## BIRTHS.

Births registered in the 641 Registrars' Districts into which Saorstát Éireann is divided for registration purposes, amounted to 14,999, of which 7,714 were those of males and 7,285 of females, or 1,059 of the former to 1,000 of the latter.

The birth-rate was 19·9 per 1,000 of the estimated population, being 0·5 below the average (20·4) for the second quarter of the five years, 1929-33 (See Table I).

The birth-rate for **Urban Districts** (including the cities or boroughs) was 25·3, and for **Rural Districts**, 17·6, as compared with 24·3 and 18·2, respectively, in the second quarter of 1933 (See Table IV).

For the **Twelve Principal Towns**, the birth-rate was 26·4, as against 25·3 in the corresponding quarter of 1933.

Amongst these towns, the rates varied from 30·4 for Galway, 30·2 for Drogheda, and 28·7 for Kilkenny, to 17·2 for Dún Laoghaire, 21·1 for Dundalk, and 22·4 for Tralee.

## DEATHS.

The number of deaths registered during the quarter was 10,029, and of these 5,128 were deaths of males and 4,901 of females. For all persons the equivalent annual rate was 13·3 per 1,000 of the estimated population, being 1·3 below the average for the second quarter of the preceding quinquennial period, but 0·3 above the rate for the second quarter of the year 1933 (See Table I).

For the **Urban Districts** in the aggregate, the death-rate was 13·6, as compared with 13·7 in the second quarter of 1933, and for **Rural Districts**, 13·2, in comparison with 12·7 for the corresponding period of the year 1933.

The annual rate represented by deaths from all causes for the **Twelve Principal Towns** in the aggregate was 13·7, as compared with 13·6 in the second quarter of 1933.

The rate for each of these towns is as follows, ranging in order from that with the lowest rate to that with the highest—Limerick, 12·7, Waterford 12·9, Tralee 13·3, Dublin 13·5, Galway 13·8, Sligo 14·0, Cork and Drogheda 14·2, Dún Laoghaire 14·4, Dundalk 14·6, Kilkenny 15·9, and Wexford 18·5.

## Causes of Death.

Table II shows the mortality from some of the principal causes for two quarters of 1934 and for each quarter of the preceding five years, as well as the averages for each quarter of these years.

**Principal Epidemic Diseases.**—From this Table it will be seen that the number of deaths (309) from this group of causes is 22 above that for the second quarter of 1933, but is 40 below the average for the second quarter of the five years 1929-33. Increases are shown in typhoid fever, scarlet fever, whooping-cough, and diphtheria, in comparison with the average for the previous five years. The increase in typhoid fever was 8, in scarlet fever 10, in whooping-cough 6, and in diphtheria 8 when compared with the average. Decreases have occurred in measles, and diarrhoea and enteritis of children under 2 years of age, amounting to 44 and 27 respectively.

Deaths from diarrhoea and enteritis of children under 2 years, numbered 74; of these 36 (or 6·4 per 1,000 births) were recorded for urban areas, as against 38 (or 4·1 per 1,000 births) for rural areas. For urban areas of 10,000 population and upwards ("Twelve Principal Towns"), the mortality was 5·5 per 1,000 births, as compared with 9·9 per 1,000 for urban districts with less than 10,000 inhabitants.

Table III shows that the mortality from the principal epidemic diseases in the Counties and Cities varied from 0·0 for County Longford, 0·1 for Westmeath and Wicklow to 0·8 for Louth, Kerry, and Waterford County Borough.

The death-rate from these diseases for the twelve principal towns in the aggregate, was 0·7, the rates varying between 0·3 for each of Dún Laoghaire and Galway and 3·0 for Tralee; the 35 deaths from all causes for the latter area included 7 from whooping-cough, and one from diarrhoea and enteritis of a child under 2 years (Table IV).

**Influenza.**—Deaths from influenza numbered 214, representing an annual rate of 0·3 per 1,000. The average number for the second quarter of the preceding five years was 417, with a rate of 0·6. Of the deaths for the quarter under review, 33 appertained to urban areas, and 181 to rural districts; the corresponding numbers for the second quarter of 1933 were 58 and 325.

**Tuberculosis.**—The number of deaths from all forms of this disease during the quarter was 1,018, equivalent to an annual rate of 1·4 per 1,000 of the population, as compared with an average of 1,057, and a rate of 1·4 for the second quarter of the five years, 1929-33. As may be seen from Table III, the rates varied from 2·3 for Waterford county borough and 2·0 for each of the county boroughs of Dublin and Cork to 0·8 for Waterford County, 0·9 for Tipperary N.R., and 1·0 for each of the counties of Cork, Limerick, Tipperary S.R., Mayo and Donegal. The rate for the aggregate city or borough areas and urban districts was 1·8 per 1,000 of the population of these areas, as compared with 1·1 for rural areas. For the twelve principal town areas it was 2·0, and for the urban districts under 10,000 population the rate was 1·3.

**Puerperal Conditions.**—The number of deaths ascribed to accidents and diseases of pregnancy and childbirth, was 79, being equal to 5·3 per 1,000 births registered. Of the 79 deaths, 34 were due to puerperal sepsis, or 2·3 per 1,000 births, and 45, or 3·0 per 1,000 births, to other puerperal conditions. The corresponding rates for the second quarter of 1933 were 0·9 and 2·8 respectively.

#### **Ages at Death.**

Of the total deaths at all ages registered during the quarter, 874 or 8·7 per cent. were those of infants under one year of age, and 4,568, or 45·5 per cent. were those of persons 65 years and upwards.

**Infant Mortality.**—The infant mortality rate was 58 per 1,000 births registered, as compared with 55, 68, and 80 respectively, for the three preceding quarters, and an average of 67 for the second quarter of the five years preceding (Table I).

For county boroughs and urban districts in the aggregate, the rate was 67, and for all rural districts 53 per 1,000 births (Table III).

#### **Deaths in Public Institutions.**

Deaths in Institutions numbered 3,051, or 30·4 per cent. of all deaths registered.

#### **Inquests.**

There were 271 inquests or deaths registered on Coroners' Certificates during the quarter, this number being 2·7 per cent. of the total deaths registered.

#### **Uncertified Deaths.**

The number of entries in which the cause of death was not stated to have been certified by a medical practitioner was 1,906, or 19·0 per cent. of the total deaths.

#### **Cases of Infectious Diseases Notified.**

Table VI gives the number of such cases notified during the quarter in urban and rural districts. The total number amounted to 2,025.

#### **Vaccination.**

As returned by the Registrars, the number of successful primary vaccinations during the quarter ended 30th June last was 10,315, or 68·8 per cent. of the births registered during the quarter, the corresponding ratio for the second quarter of the five years 1929-33, being 110·9.

**CITY OF DUBLIN.**

**BIRTHS.**

Exclusive of 391 births in institutions relating to residents of other localities, the number of births recorded for the City of Dublin during the quarter under review was 2,918. The annual rate represented thereby was 27·5 per 1,000 of the estimated population, as compared with a rate of 26·7 for the corresponding quarter of 1933. The total births registered (3,309) comprise 1,724 boys and 1,585 girls.

**DEATHS.**

Omitting 241 deaths registered in the city relating to other localities, and including those of persons usually resident in the city who died elsewhere in Saorstát Éireann, the deaths for Dublin during the quarter numbered 1,427, equivalent to an annual rate of 13·5 per 1,000 of the population, as compared with 13·3 for the second quarter of 1933. The total number of deaths registered in the city was 1,632—834 males and 798 females.

**Causes of Death.**

The following statement shows the number of deaths from some of the principal causes for the second quarter of 1934, as compared with 1933 :—

| CITY OF DUBLIN              |  |                      |                      |
|-----------------------------|--|----------------------|----------------------|
| CAUSE OF DEATH              |  | Second Quarter, 1934 | Second Quarter, 1933 |
| Principal Epidemic Diseases | Typhoid fever .. ..                                | 2                    | 1                    |
|                             | Typhus .. ..                                       | .                    | .                    |
|                             | Small-pox .. ..                                    | .                    | .                    |
|                             | Measles .. ..                                      | 1                    | 19                   |
|                             | Scarlet fever .. ..                                | 1                    | .                    |
|                             | Whooping-cough .. ..                               | 29                   | 17                   |
|                             | Diphtheria .. ..                                   | 19                   | 17                   |
|                             | Dysentery .. ..                                    | .                    | .                    |
|                             | Diarrhoea and enteritis (children under 2 years) } | 11                   | 16                   |
|                             | Influenza .. ..                                    | 11                   | 16                   |
|                             | Pulmonary tuberculosis .. ..                       | 166                  | 162                  |
|                             | Other forms .. ..                                  | 47                   | 44                   |

When compared with the figures for the second quarter of 1933, deaths from whooping-cough show the greatest increase, being 12 above that for the same period of 1933; deaths from tuberculous disease also show a slight increase; on the other hand deaths from measles have decreased by 18 in comparison with the figure for the second quarter of last year; the figures for diarrhoea and enteritis (children under 2 years), and influenza also show a downward tendency, being 5 less in each case than the corresponding figures in 1933.

**Principal Epidemic Diseases.**—The deaths from this group of causes numbered 63, affording an annual rate of 0·6 per 1,000, being 0·1 below that for the second quarter of the preceding year.

**Tuberculosis.**—The deaths from all forms of tuberculous disease recorded for the city numbered 213, representing an annual rate of 2·01 per 1,000, as compared with 1·96 for the second quarter of the preceding year.

Of the 213 deaths, 166 were ascribed to pulmonary and 47 to other forms of the disease, the former representing a rate of 1·57 per 1,000, and the latter 0·44 per 1,000.

**Ages at Death.**

Of the 1,427 deaths relating to the City of Dublin, registered during the quarter, 254 (or 17·8 per cent.) were those of children under five years of age, and 418 (or 29·3 per cent.) were of persons 65 years of age or upwards, the corresponding percentages in respect of the second quarter of 1933 being 21·5 and 25·4.

**Infant Mortality.**

There were 192 deaths of infants under one year of age for the city, equivalent to a rate of 66 per 1,000 births. In the second quarter of 1933 the rate was 69.

**Deaths in Public Institutions.**

The deaths of Dublin residents occurring in public institutions, registered during the quarter, numbered 766, or 53·7 per cent. of the total deaths.

**Cases of Infectious Disease.**

The number of cases of infectious disease notified during the quarter, as shown in Table VI, was 459. Table VII gives the number of cases under treatment in Dublin hospitals during the quarter.

**METEOROLOGY.**

The mean temperature for the thirteen weeks ended 30th June, 1934, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was  $51.9^{\circ}$ ; at Cork (Roche's Point) it was  $51.6^{\circ}$ ; at Peamount Sanatorium  $50.5^{\circ}$ ; at Greenwich  $55.6^{\circ}$ ; at Glasgow  $51.1^{\circ}$ , and at Edinburgh  $49.8^{\circ}$ .

The mean daily number of hours of bright sunshine recorded for the period at Dublin was 5.7; at Cork (Ballinacurra), 5.8; at Peamount Sanatorium, 5.6; at Greenwich, 5.4; at Glasgow, 4.6; and at Edinburgh, 5.0.

The rainfall during the same period measured at Dublin 5.31 inches; at Cork (Roche's Point), 7.01 inches; at Peamount Sanatorium, 5.40 inches; at Greenwich, 4.02 inches; at Glasgow, 7.34 inches; and at Edinburgh, 8.08 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London:—

**April.**

Unsettled, dull and rather cool weather prevailed during April.

Mean temperature for the month was below the average, the greatest deficiency being  $2.0^{\circ}$  F. at Seskin, Carrick-on-Suir. The first ten or eleven days were cold with winds mainly from between north and east, and the coldest day as well as the coldest night occurred generally during this period. The 30th was a warm day, and a warm spell was enjoyed from the 14th—17th.

Although rainfall exceeded the normal for the country generally, individual totals were rather variable. Among the heaviest daily falls were 36 mm. at Seskin, 32 mm. at Cork and 31 mm. at Cahirciveen on the 13th and 32 mm. at Waterford on the 5th.

One of the principal features of the weather was the almost universal scarcity of sunshine, the deficiency amounting to 53 hours at Malin Head and 42 hours at Seskin. A notable exception was Cahirciveen, with an excess of nearly 34 hours.

**May.**

The weather during May was mainly dull, and rather wet in the north but with a deficiency of rainfall at many places in the south.

Mean temperature was variable, the deviation from the average ranging from  $+1.7^{\circ}$  F. at Phoenix Park, Dublin, to  $-1.2^{\circ}$  F. at Poynes, Limerick. Warm spells occurred between the 9th and 11th and on the 31st. Maxima above  $70^{\circ}$  F. were recorded locally and  $75^{\circ}$  F. was reached at Mountmellick on the 11th and  $74^{\circ}$  F. at Birr Castle on the 11th and at Markree Castle on the 31st. A cold period was experienced from the 12th to 18th.

Rainfall was rather variable but as a rule exceeded the normal in the north and fell below the normal at many places in the south. The wettest days were generally the 15th and 17th, and heavy daily falls included 36 mm. at Waterford and 25 mm. at Seskin on the 17th.

Sunshine was generally deficient, the deficiency amounting to 51 hours at Malin Head and 35 hours at Cahirciveen.

**June.**

Warm, dry and mainly sunny weather prevailed generally during June.

Mean temperature for the month was markedly above the average, the excess varying from  $1.7^{\circ}$  F. at Roches Point to  $4.0^{\circ}$  F. at Phoenix Park, Dublin. Notably warm spells occurred around the 11th, 17th and 30th:  $80^{\circ}$  F. was registered at Mallarany on the 11th and 12th and  $79^{\circ}$  F. at Poynes on the 11th.

Rainfall over the country as a whole amounted to 72 per cent. of the normal. Among the heaviest falls recorded in 24 hours were 29 mm. at Malin Head on the 21st and 27 mm. at Seskin, Carrick-on-Suir, on the 23rd.

Sunshine aggregates everywhere exceeded the average, the excess amounting to 37 hours at Markree Castle. The first six days were exceptionally sunny in some places; for example, at Markree Castle the total for this period was 83 hours and at Cahirciveen, nearly 80 hours.

TABLE A.—Showing the Mean Weekly Values and the Differences from their Average Values of the METEOROLOGICAL ELEMENTS at Phoenix Park, Dublin, for the Thirteen Weeks ended 30th June, 1934.

| WEEK ENDED      | AIR PRESSURE.                    |                          | TEMPERATURE. |            |                 |                                     |          | HYGROMETER. |                   |                   | BRIGHT SUNSHINE. |                    | RAINFALL.*                          |                         |               | WIND. |                                     |                 |

\* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1934; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

## URBAN DISTRICTS.

TABLE IV.—BIRTHS AND DEATHS registered during the Quarter ended 30th June, 1934, relating to Urban Districts (including County Boroughs), and the number of Deaths from some of the principal causes (see Note on second page); also particulars of BIRTHS and DEATHS (inclusive of those occurring in public Institutions belonging to other localities) for BELFAST and LONDONDERRY.

\*The rates for *Saorslát Éireann*, the City of Dublin and the Borough of *Dún Laoghaire* are calculated on the estimated populations in the middle of 1931. †Including all deaths registered on Coroners' Certificates.

**TABLE V.—Showing for the Quarter (13 weeks) ended 30th June, 1934, the mortality from All Causes and from some of the Principal Causes of residents of the several REGISTRARS' DISTRICTS in the CITIES OF DUBLIN and CORK \* also the Deaths at certain age periods, and the number of Uncertified Deaths.**  
**NOTE :** This Table is a summary of the Weekly Returns and is not comparable with the figures shown in Table IV. \* Correction is made for Deaths of Dublin and Cork City residents occurring in institutions situated within their boundaries, as well as in institutions situated in adjacent rural areas and in other towns of 10,000 inhabitants or upwards. See Note on second page.

QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN

DURING THE QUARTER ENDED 30th SEPTEMBER, 1934.

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

*Certain Detailed information relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts ; Notifications of certain Infectious Diseases in Urban and Rural areas, Persons Vaccinated, &c., &c., &c.*

---

*By Authority of the Registrar-General.*

---

To be purchased directly from the  
GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN C2,  
or through any Bookseller.

---

*Price Sixpence Net.*

---

*NOTE.—The figures given in this Report, being based on unrevised Registrars' Returns and compiled as soon as possible after the close of the Quarter, must be regarded as provisional. Revised figures will appear in the Detailed Annual Report.*

*The Deaths registered in any part of the country are referred to the normal area of residence of deceased. Deaths, if any, of residents of other countries remain in the Districts in which they occur.*

*The Births registered in each urban area, according to numerical returns furnished by the Registrars, have been partially corrected by the exclusion of those occurring in institutions of infants whose mothers were admitted from other localities. No correction is made in these reports for births in rural areas. In Table IV, as a consequence, there is liability to slight understatement in the births for urban districts, and a corresponding overstatement in those given for the rural districts.*

---

### GENERAL SUMMARY.

The **Marriage-rate** for the third quarter of 1934 was 5·2 per 1,000 of the estimated population. This rate is 0·4 above the average for the corresponding quarter of the five years, 1929-33. The rate for Catholic marriages was 5·3 and for all other marriages 4·2 per 1,000.

In Northern Ireland the marriage-rate for the quarter was 7·8 per 1,000; and in Scotland 8·6. In England and Wales the rate for the second quarter was 8·4 per 1,000.

The **Birth-rate** was 19·5 per 1,000, representing 14,704 births registered. This rate is 0·5 below the average (20·0) for the third quarter of the five years, 1929-33. For Dublin City the birth-rate was 26·1; for Dún Laoghaire, 22·3; for Cork, 24·3; for Limerick, 25·0; and for Waterford, 27·2.

The corresponding birth-rate for Northern Ireland during the quarter was 19·3; for England and Wales, 14·7; and for Scotland, 17·1. The birth-rate for Belfast was 21·0; for Londonderry, 26·2; for London, 13·2; for Glasgow, 18·9; and for Edinburgh, 14·9.

The rate in respect of **Deaths** registered (in number 8,243) was 10·9, being 0·6 below the average (11·5) for the third quarter of the preceding five years.

For Dublin City the death-rate was 11·3; for Dún Laoghaire, 14·4; for Cork, 12·6; for Limerick, 10·8; and for Waterford, 13·2.

In Northern Ireland the death-rate for the quarter under review was 11·0 per 1,000; in England and Wales, 9·6; and in Scotland, 10·7. In Belfast the rate was 11·0; in Londonderry, 12·0; in London, 8·9; in Glasgow, 10·5; and in Edinburgh, 10·9.

Deaths from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) afforded an annual rate of 0·4 per 1,000, which is 0·1 below the average for the third quarter of the five years, 1929-33.

The mortality from **Influenza** was equivalent to a rate of 0·1 per 1,000, which is equal to the average for the corresponding quarter of the preceding five years.

The rate for deaths from all forms of **Tuberculous Disease** was 1·0 per 1,000, being 0·2 below the average rate for the third quarter of the five years preceding.

Deaths from **Puerperal Conditions** are represented by a rate of 3·5 per 1,000 births registered, comprising 1·2 for puerperal sepsis and 2·3 for other puerperal conditions, as compared with 4·2, 1·2 and 3·0 for the third quarter of 1933.

The **Infant Mortality** rate (deaths of infants under one year of age per 1,000 births registered) was 56, in comparison with an average of 55 for the third quarter of the five years, 1929-33.

---

The **Population** in the middle of 1934 is estimated as 3,013,000 persons (comprising 1,535,000 males and 1,478,000 females) showing an increase of 21,000 on the estimate to the middle of 1933. This increase is derived from the natural increase (excess of births over deaths), and the excess of immigration over emigration.

The **Natural Increase** during the third quarter of 1934 was 6,461, as compared with an average of 6,301 for the third quarter of the five years, 1929-33.

During the third quarter of 1934, the number of **Emigrants** to places out of Europe and not within the Mediterranean Sea was 299, and the number of **Immigrants** from these places was 532.

**MARRIAGES.**

The marriages registered during the quarter ended 30th September, 1934, numbered 3,937, equivalent to an annual rate of 5·2 per 1,000 of the estimated population, this rate being 0·4 above that for the corresponding quarter of 1933, and also 0·4 above the average for the third quarter of the five years, 1929-33 (See Table I). Of the total marriages 3,702 (or 5·3 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (235) is equivalent to 4·2 per 1,000 of the population other than Catholic. The rate for Catholic marriages is 0·6 above and that for other marriages is 1·3 below, the respective rates for the third quarter of the preceding year.

**BIRTHS.**

Births registered in the 642 Registrars' Districts into which Saorstát Éireann is divided for registration purposes, amounted to 14,704, of which 7,550 were those of males and 7,154 of females, or 1,055 of the former to 1,000 of the latter.

The birth-rate was 19·5 per 1,000 of the estimated population, being 0·5 below the average (20·0) for the third quarter of the five years, 1929-33 (See Table I).

The birth-rate for **Urban Districts** (including the cities or boroughs) was 24·8, and for **Rural Districts**, 17·3, as compared with 25·2 and 17·7, respectively, in the third quarter of 1933 (See Table IV).

For the **Twelve Principal Towns**, the birth-rate was 25·9, as against 26·1 in the corresponding quarter of 1933.

Amongst these towns, the rates varied from 33·7 for Drogheda, 30·0 for Tralee, and 29·2 for Galway to 22·3 for Dún Laoghaire, 23·9 for Kilkenny, and 24·3 for Cork Co. Borough.

**DEATHS.**

The number of deaths registered during the quarter was 8,243, and of these 4,187 were deaths of males and 4,056 of females. For all persons the equivalent annual rate was 10·9 per 1,000 of the estimated population, being 0·6 below the average for the third quarter of the preceding quinquennial period, and 0·2 below the rate for the third quarter of the year 1933 (See Table I).

For the **Urban Districts** in the aggregate, the death-rate was 11·6, as compared with 12·0 in the third quarter of 1933, and for **Rural Districts**, 10·7, in comparison with 10·6 for the corresponding period of the year 1933.

The annual rate represented by deaths from all causes for the **Twelve Principal Towns** in the aggregate was 11·9, as compared with 12·3 in the third quarter of 1933.

The rate for each of these towns is as follows, ranging in order from that with the lowest rate to that with the highest—Kilkenny 8·8, Sligo 9·1, Limerick 10·8, Dublin 11·3, Tralee 11·4, Cork 12·6, Wexford 12·8, Drogheda 12·9, Waterford 13·2, Dún Laoghaire 14·4, Dundalk 16·0, and Galway 17·7.

**Causes of Death.**

Table II shows the mortality from some of the principal causes for three quarters of 1934 and for each quarter of the preceding five years, as well as the averages for each quarter of these years.

**Principal Epidemic Diseases.**—From this Table it will be seen that the number of deaths (317) from this group of causes is 90 below that for the third quarter of 1933, and is 60 below the average for the third quarter of the five years 1929-33. When compared with the average figure, the number of deaths from diarrhoea and enteritis of children under 2 years declined by 24, and from each of diphtheria and measles by 13. Slight decreases are also shown in the deaths from typhoid fever and whooping-cough.

Deaths from diarrhoea and enteritis of children under 2 years, numbered 153; of these 108 (or 19·5 per 1,000 births) were recorded for urban areas, as against 45 (or 4·9 per 1,000 births) for rural areas. For urban areas of 10,000 population and upwards ("Twelve Principal Towns"), the mortality was 21·7 per 1,000 births, as compared with 10·2 per 1,000 for urban districts with less than 10,000 inhabitants.

Table III shows that the mortality-rate from the principal epidemic diseases in the Counties and Cities varied from 0·0 for County Cavan, and 0·1 for Carlow, Meath, Wexford, Roscommon and Monaghan to 1·0 for City of Dublin and Limerick County Borough, and 1·1 Waterford County Borough.

The death-rate from these diseases for the twelve principal towns in the aggregate was 0·9, the rates varying between 0·0 for Kilkenny and 0·1 for Dún Laoghaire to 2·0 for Dundalk; the 56 deaths from all causes for the latter area included 7 from diarrhoea and enteritis of children under 2 years (Table IV).

**Influenza.**—Deaths from influenza numbered 67, representing an annual rate of 0·1 per 1,000. The average number for the third quarter of the preceding five years was 97, with a rate of 0·1. Of the deaths for the quarter under review, 7 appertained to urban districts, and 60 to rural districts; the corresponding numbers for the third quarter of 1933 were 9 and 83.

**Tuberculosis.**—The number of deaths from all forms of this disease during the quarter was 741, equivalent to an annual rate of 1·0 per 1,000 of the population, as compared with an average of 848, and a rate of 1·2 for the third quarter of the five years, 1929-33. As may be seen from Table III, the rates varied from 1·8 for Louth county and 1·6 for Cork county borough to 0·4 for each of the counties of Meath, Clare and Sligo; and 0·5 for Roscommon. The rate for the aggregate city or borough areas and urban districts was 1·4 per 1,000 of the population of these areas, as compared with 0·8 for rural areas. For the twelve principal town areas it was 1·5, and for the urban districts under 10,000 population the rate was 1·2.

**Puerperal Conditions.**—The number of deaths ascribed to accidents and diseases of pregnancy and childbirth, was 51, being equal to 3·5 per 1,000 births registered. Of the 51 deaths, 17 were due to puerperal sepsis, or 1·2 per 1,000 births, and 34, or 2·3 per 1,000 births, to other puerperal conditions. The corresponding rates for the third quarter of 1933 were 4·2, 1·2 and 3·0 respectively.

#### **Ages at Death.**

Of the total deaths at all ages registered during the quarter, 818 or 9·9 per cent. were those of infants under one year of age, and 3,568, or 43·3 per cent. were those of persons 65 years and upwards.

**Infant Mortality.**—The infant mortality rate was 56 per 1,000 births registered, as compared with 68, 80, and 58 respectively, for the three preceding quarters, and an average of 55 for the third quarter of the five years preceding (Table I).

For county boroughs and urban districts in the aggregate the rate was 71, and for all rural districts 46 per 1,000 births (Table III).

#### **Deaths in Public Institutions.**

Deaths in Institutions numbered 2,569, or 31·2 per cent. of all deaths registered.

#### **Inquests.**

There were 310 inquests or deaths registered on Coroners' Certificates during the quarter, this number being 3·8 per cent. of the total deaths registered.

#### **Uncertified Deaths.**

The number of entries in which the cause of death was not stated to have been certified by a medical practitioner was 1,415, or 17·2 per cent. of the total deaths.

#### **Cases of Infectious Diseases Notified.**

Table VI gives the number of such cases notified during the quarter in urban and rural districts. The total number amounted to 1,603.

#### **Vaccination.**

As returned by the Registrars, the number of successful primary vaccinations during the quarter ended 30th September last was 11,191, or 76·1 per cent. of the births registered during the quarter, the corresponding rate for the third quarter of the five years 1929-33, being 90·6.

## CITY OF DUBLIN.

## BIRTHS.

Exclusive of 417 births in institutions of infants whose mothers were admitted from other localities, the number of births recorded for the City of Dublin during the quarter under review was 2,767. The annual rate represented thereby was 26.1 per 1,000 of the estimated population, as compared with a rate of 27.2 for the corresponding quarter of 1933. The total births registered (3,184) comprise 1,654 boys and 1,530 girls.

## DEATHS.

Omitting 221 deaths registered in the city relating to other localities, and including those of persons usually resident in the city who died elsewhere in Saorstát Éireann, the deaths for Dublin during the quarter numbered 1,198, equivalent to an annual rate of 11.3 per 1,000 of the population, as compared with 11.8 for the third quarter of 1933. The total number of deaths registered in the city was 1,374—682 males and 692 females.

## Causes of Death.

The following statement shows the number of deaths from some of the principal causes for the third quarter of 1934, as compared with 1933 :—

| CITY OF DUBLIN              |  |                     |                     |
|-----------------------------|--|---------------------|---------------------|
| CAUSE OF DEATH              |  | Third Quarter, 1934 | Third Quarter, 1933 |
| Principal Epidemic Diseases | Typhoid fever .. ..                                | 3                   | 2                   |
|                             | Typhus .. ..                                       | .                   | .                   |
|                             | Small-pox .. ..                                    | .                   | .                   |
|                             | Measles .. ..                                      | 3                   | 3                   |
|                             | Scarlet fever .. ..                                | 2                   | 1                   |
|                             | Whooping-cough .. ..                               | 24                  | 8                   |
|                             | Diphtheria .. ..                                   | 11                  | 25                  |
|                             | Dysentery .. ..                                    | .                   | .                   |
|                             | Diarrhoea and enteritis (children under 2 years) } | 64                  | 74                  |
|                             | Influenza .. ..                                    | 3                   | 1                   |
| Pulmonary tuberculosis ..   |  | 116                 | 123                 |
| Other forms .. ..           |  | 38                  | 39                  |

When compared with the figures for the third quarter of 1933, deaths from whooping-cough show the greatest increase, being 16 above that for the same period of 1933; on the other hand deaths from diphtheria, and diarrhoea and enteritis of children under 2 years show a decrease of 14 and 10 respectively in comparison with the figures for the third quarter of 1933; a slight decrease is also shown in the deaths from tuberculous disease.

**Principal Epidemic Diseases.**—The deaths from this group of causes numbered 107, affording an annual rate of 1.0 per 1,000, being 0.1 below that for the third quarter of the preceding year.

**Tuberculosis.**—The deaths from all forms of tuberculous disease recorded for the city numbered 154, representing an annual rate of 1.45 per 1,000, as compared with 1.54 for the third quarter of the preceding year.

Of the 154 deaths, 116 were ascribed to pulmonary and 38 to other forms of the disease, the former representing a rate of 1.09 per 1,000, and the latter 0.36 per 1,000.

## Ages at Death.

Of the 1,198 deaths relating to the City of Dublin, registered during the quarter, 273 (or 22.8 per cent.) were those of children under five years of age, and 348 (or 29.0 per cent.) were of persons 65 years of age or upwards, the corresponding percentages in respect of the third quarter of 1933 being 22.3 and 27.1.

## Infant Mortality.

There were 211 deaths of infants under one year of age for the city, equivalent to a rate of 76 per 1,000 births. In the third quarter of 1933 the rate was 75.

## Deaths in Public Institutions.

The deaths of Dublin residents occurring in public institutions, registered during the quarter, numbered 639, or 53.3 per cent. of the total deaths.

## Cases of Infectious Disease.

The number of cases of infectious disease notified during the quarter, as shown in Table VI. was 389. Table VII gives the number of cases under treatment in Dublin hospitals during the quarter.

**METEOROLOGY.**

The mean temperature for the thirteen weeks ended 29th September, 1934, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 59.3°; at Cork (Roche's Point) it was 59.5°; at Peamount Sanatorium 59.2°; at Greenwich 64.0°; at Glasgow 58.7°, and at Edinburgh 58.5°.

The mean daily number of hours of bright sunshine recorded for the period at Dublin was 5.5; at Cork (Ballinacurra), 5.4; at Peamount Sanatorium, 5.9; at Greenwich, 7.0; at Glasgow, 4.8; and at Edinburgh, 5.6.

The rainfall during the same period measured at Dublin 7.83 inches; at Cork (Roche's Point), 11.54 inches; at Peamount Sanatorium, 8.61 inches; at Greenwich, 3.78 inches; at Glasgow, 10.90 inches; and at Edinburgh, 7.79 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London:—

**July.**

The weather of July was exceptionally warm and sunny. Mean temperature everywhere exceeded the average, the excess ranging from 3.4°F. at Malin Head to 5.3°F. at Waterford. A notably warm spell occurred from about the 5th to the 11th or 12th, but it was from about the 7th to 11th that temperatures were exceptionally high. For example, at Birr Castle 85°F., or above was registered on five successive days from the 7th to 11th, and at Mallarany, 85°F. was reached or exceeded on each day from the 8th to 11th. In the south, maxima above 80°F. were registered on four consecutive days from the 7th to 10th at both Seskin and Waterford. The absolute maximum recorded was 90°F. at Foynes on the 9th.

Except in Mayo and locally in Galway, rainfall was deficient, markedly so in some places. At Balbriggan (Dublin), for example, only 22 per cent. of the normal was recorded. The first ten days were rainless in many places but a little fell locally in the south on the 1st and some was reported in the north-west on the 5th. Thereafter, rain fell fairly frequently and was heavy locally at times.

Sunshine was abundant, particularly from the 2nd to the 11th or 12th. During the ten days, 2nd to 11th, Mallarany registered 119 hours, Hazlehead 126 hours, Rathfarnham 123 hours, Phoenix Park (Dublin) 122 hours and Seskin (Carrick-on-Suir) 133 hours.

**August.**

Unsettled weather prevailed generally during August. In northern districts, apart from Blacksod Point, rainfall was decidedly in excess of the normal, but in the southern half of the country the distribution was more variable, some places in the east and south-west recording a deficiency. The percentage of the average varied from 76 at Dunmanway (Cork) to 147 at Markree Observatory (Sligo). The 1st was a wet day generally; for example, 53 mm. were registered at Mountmellick, 47 mm. at Ballinacurra and 41 mm. at Birr Castle.

In contrast to the excessive warmth of July, mean temperature for August was, on the whole, slightly below the average and at most places in the north the absolute maximum for the month failed to reach 70° F. The warmest days were, as a rule, the 7th, 15th and 18th, and 75°F. was recorded at Glasnevin on the 15th, at Trinity College (Dublin) on the 15th and 18th and at Newcastle (Wicklow) on the 15th, 18th and 19th.

Sunshine aggregates were deficient on the whole in the north and variable in the south. At Malin Head the deficiency amounted to 37 hours but Birr Castle and Ballinacurra enjoyed an excess of about 11 hours and 9 hours respectively.

**September.**

The weather of September was chiefly distinguished by a marked excess of rainfall, the percentage of the normal over the country as a whole exceeding 200. The rainfall was not only excessive but frequent, the number of rain-days being decidedly above the average. Heavy falls in 24 hours included 40 mm. at Ballinacurra on the 6th, 35 mm. at Hacketstown Rectory and at Seskin on the 16th, and 37 mm. at Blacksod Point on the 25th.

Mean temperature on the whole exceeded the average, although it fell slightly below the average at some stations in the southern half of the country. The excess was greatest around Dublin and amounted to 2.8°F. at Phoenix Park. The warmest periods occurred around the 18th and 28th, when 70°F. was exceeded locally. A maximum of 75°F. was recorded at Birr Castle, Mountmellick and Seskin on the 14th.

In spite of the excessive rainfall sunshine aggregates exceeded the average locally: at Birr Castle the excess was 13 hours.

TABLE A.—Showing the Mean Weekly Values and the Differences from their Average Values of the METEOROLOGICAL ELEMENTS at Phoenix Park, Dublin, for the Thirteen Weeks ended September 29th, 1934.

\* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1934; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

**URBAN DISTRICTS.**

TABLE IV.—BIRTHS AND DEATHS registered during the Quarter ended 30th September, 1934, relating to Urban Districts (including County Boroughs), and the number of Deaths from some of the principal causes (see Note on second page); also particulars of BIRTHS and DEATHS (inclusive of those occurring in public Institutions belonging to other localities) for BELFAST and LONDONDERRY.

[illegible]

\* The rates for Saorstát Éireann, the City of Dublin and the Borough of Dun Laoghaire are calculated on the estimated populations in the middle of 1934.  
† Including all deaths registered on Coroners' Certificates.

TABLE V.—Showing for the Quarter (13 weeks) ended 29th September, 1934, the mortality from All Causes and from some of the Principal Causes of residents of the several REGISTRARS' DISTRICTS in the CITIES OF DUBLIN and CORK,\* also the Deaths at certain age periods, and the number of Uncertified Deaths.

NOTE : This Table is a summary of the Weekly Returns and is not comparable with the figures shown in Table IV.—Correction is made for Deaths of Dublin and Cork City residents occurring in institutions situated within their boundaries, as well as in institutions situated in adjacent rural areas and in other towns of 10,000 inhabitants or upwards. See Note on second page.

QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN

DURING THE QUARTER ENDED 31st DECEMBER, 1934.

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

*Certain Detailed information relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts ; Notifications of certain Infectious Diseases in Urban and Rural areas, Persons Vaccinated, &c., &c., &c.*

ALSO

YEARLY SUMMARY 1934.

---

*By Authority of the Registrar-General.*

To be purchased directly from the  
GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN 2,  
or through any Bookseller.

---

*Price Sixpence Net.*

*NOTE.—The figures given in this Report, being based on unrevised Registrars' Returns and compiled as soon as possible after the close of the Quarter, must be regarded as provisional. Revised figures will appear in the Detailed Annual Report.*

*The Deaths registered in any part of the country are referred to the normal area of residence of deceased. Deaths, if any, of residents of other countries remain in the Districts in which they occur.*

*The Births registered in each urban area, according to numerical returns furnished by the Registrars, have been partially corrected by the exclusion of those occurring in institutions of infants whose mothers were admitted from other localities. No correction is made in these reports for births in rural areas. In Table IV, as a consequence, there is liability to slight understatement in the births for urban districts, and a corresponding overstatement in those given for the rural districts.*

### GENERAL SUMMARY.

The **Marriage-rate** for the fourth quarter of 1934 was 4·6 per 1,000 of the estimated population. This rate is 0·4 above the average for the corresponding quarter of the five years, 1929-33. The rate for Catholic marriages was 4·6 and for all other marriages 3·6 per 1,000. In Northern Ireland the marriage-rate for the quarter was 6·9 per 1,000; and in Scotland 7·7. In England and Wales the rate was 8·7 per 1,000.

The **Birth-rate** was 18·1 per 1,000, representing 13,600 births registered. This rate is 0·1 below the average (18·2) for the fourth quarter of the five years, 1929-33. For Dublin City the birth-rate was 24·5; for Dún Laoghaire, 18·1; for Cork, 21·4; for Limerick, 23·2; and for Waterford, 20·0.

The corresponding birth-rate for Northern Ireland during the quarter was 18·5; for England and Wales, 14·0; and for Scotland, 17·3. The birth-rate for Belfast was 19·8; for Londonderry, 26·5; for London, 12·3; for Glasgow, 19·1; and for Edinburgh, 15·1.

The rate in respect of **Deaths** registered (in number 9,206) was 12·2, being 0·9 below the average (13·1) for the fourth quarter of the preceding five years.

For Dublin City the death-rate was 12·9; for Dún Laoghaire, 13·2; for Cork, 12·9; for Limerick, 12·9; and for Waterford, 14·1.

In Northern Ireland the death-rate for the quarter under review was 13·4 per 1,000; in England and Wales, 11·2; and in Scotland, 13·1. In Belfast the rate was 13·6; in Londonderry, 14·4; in London, 11·0; in Glasgow, 14·2; and in Edinburgh, 12·8.

Deaths from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) afforded an annual rate of 0·3 per 1,000, which is 0·2 below the average for the fourth quarter of the five years, 1929-33.

The mortality from **Influenza** was equivalent to a rate of 0·1 per 1,000, which is 0·1 below the average for the corresponding quarter of the preceding five years.

The rate for deaths from all forms of **Tuberculous Disease** was 1·0 per 1,000, being 0·1 below the average rate for the fourth quarter of the five years preceding.

Deaths from **Puerperal Conditions** are represented by a rate of 4·1 per 1,000 births registered, comprising 1·0 for puerperal sepsis and 3·1 for other puerperal conditions, as compared with 4·4, 2·2 and 2·2 for the fourth quarter of 1933.

The **Infant Mortality** rate (deaths of infants under one year of age per 1,000 births registered) was 57, in comparison with an average of 70 for the fourth quarter of the five years, 1929-33.

The **Population** in the middle of 1934 is estimated as 3,013,000 persons (comprising 1,535,000 males and 1,478,000 females) showing an increase of 20,000 on the estimate to the middle of 1933. This increase is derived from the natural increase (excess of births over deaths), and the excess of immigration over emigration.

The **Natural Increase** during the fourth quarter of 1934 was 4,394, as compared with an average of 3,827 for the fourth quarter of the five years, 1929-33.

During the fourth quarter of 1934, the number of **Emigrants** to places out of Europe and not within the Mediterranean Sea was 324, and the number of **Immigrants** from these places was 566.

## MARRIAGES.

The marriages registered during the quarter ended 31st December, 1934, numbered 3,429, equivalent to an annual rate of 4·6 per 1,000 of the estimated population, this rate being 0·1 above that for the corresponding quarter of 1933, and also 0·4 above the average for the fourth quarter of the five years, 1929-33 (See Table I). Of the total marriages, 3,230 (or 4·6 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (199) is equivalent to 3·6 per 1,000 of the population other than Catholic. The rate for Catholic marriages is 0·1 above and that for other marriages is 0·1 below the respective rates for the fourth quarter of the preceding year.

## BIRTHS.

Births registered in the 641 Registrars' Districts into which Saorstát Éireann is divided for registration purposes, amounted to 13,600, of which 7,066 were those of males and 6,534 of females, or 1,081 of the former to 1,000 of the latter.

The birth-rate was 18·1 per 1,000 of the estimated population, being 0·1 below the average (18·2) for the fourth quarter of the five years, 1929-33 (See Table I).

The birth-rate for **Urban Districts** (including the cities or boroughs) was 22·4, and for **Rural Districts**, 16·2, as compared with 21·7 and 17·0, respectively, in the fourth quarter of 1933 (See Table IV).

For the **Twelve Principal Towns**, the birth-rate was 23·2, as against 22·4 in the corresponding quarter of 1933.

Amongst these towns, the rates varied from 29·6 for Drogheda, 24·5 for Dublin City, and 23·2 for each Limerick Co. Borough, and Wexford to 17·5 for Sligo, 18·1 for Dún Laoghaire, and 18·6 for Dundalk.

## DEATHS.

The number of deaths registered during the quarter was 9,206, and of these 4,720 were deaths of males and 4,486 of females. For all persons the equivalent annual rate was 12·2 per 1,000 of the estimated population, being 0·9 below the average for the fourth quarter of the preceding quinquennial period, and 0·8 below the rate for the fourth quarter of the year 1933 (See Table I).

For the **Urban Districts** in the aggregate, the death-rate was 12·8, as compared with 14·5 in the fourth quarter of 1933, and for **Rural Districts**, 12·0, in comparison with 12·4 for the corresponding period of the year 1933.

The annual rate represented by deaths from all causes for the **Twelve Principal Towns** in the aggregate was 13·0, as compared with 14·8 in the fourth quarter of 1933.

The rate for each of these towns is as follows, ranging in order from that with the lowest rate to that with the highest—Galway, 9·8, Tralee 10·3, Dublin, Cork and Limerick 12·9, Dún Laoghaire 13·2, Drogheda 13·5, Waterford 14·1, Kilkenny 14·3, Wexford 14·5, Dundalk 14·6, and Sligo 15·4.

## Causes of Death.

Table II shows the mortality from some of the principal causes for the four quarters of 1934 and for each quarter of the preceding five years, as well as the averages for each quarter of these years.

**Principal Epidemic Diseases.**—From this Table it will be seen that the number of deaths (258) from this group of causes is 161 below that for the fourth quarter of 1933, and is 148 below the average for the fourth quarter of the five years 1929-33. When compared with the average figure, a decrease is shown in each of these causes, the figure for measles having declined by 29, for whooping-cough by 38, and for each diphtheria and diarrhoea and enteritis of children under 2 years by 34.

Deaths from diarrhoea and enteritis of children under 2 years, numbered 115; of these 68 (or 13·5 per 1,000 births) were recorded for urban areas, as against 47 (or 5·5 per 1,000 births) for rural areas. For urban areas of 10,000 population and upwards ("Twelve Principal Towns"), the mortality was 14·8 per 1,000 births, as compared with 8·8 per 1,000 for urban districts with less than 10,000 inhabitants.

Table III shows that the mortality-rate from the principal epidemic diseases in the Counties and Cities varied from 0·0 for each of Laoighis and Longford Counties, and 0·1 for Westmeath, Tipperary N.R., Mayo, Cavan, and Monaghan, to 1·1 for Limerick County Borough, 1·3 for Cork County Borough, and 1·4 Waterford County Borough.

The death-rate from these diseases for the twelve principal towns in the aggregate was 0·6, the rates varying between 0·0 for Drogheda and Tralee and 0·3 for Wexford to 1·3 for Cork and 1·4 for Waterford; the 94 deaths from all causes for the latter area included 3 from measles, one from diphtheria, and 5 from diarrhoea and enteritis of children under 2 years (Table IV).

**Influenza.**—Deaths from influenza numbered 100, representing an annual rate of 0·1 per 1,000. The average number for the fourth quarter of the preceding five years was 137, with a rate of 0·2. Of the deaths for the quarter under review, 16 appertained to urban districts, and 84 to rural districts; the corresponding numbers for the fourth quarter of 1933 were 22 and 142.

**Tuberculosis.**—The number of deaths from all forms of this disease during the quarter was 753, equivalent to an annual rate of 1·6 per 1,000 of the population, as compared with an average of 798, and a rate of 1·1 for the fourth quarter of the five years, 1929-33. As may be seen from Table III, the rates varied from 1·7 for each of Wexford county and Limerick county borough, and 1·6 for Dublin county to 0·2 for Carlow county and 0·4 for Monaghan. The rate for the aggregate city or borough areas and urban districts was 1·3 per 1,000 of the population of these areas, as compared with 0·9 for rural areas. For the twelve principal town areas it was 1·3, and for the urban districts under 10,000 population the rate was 1·1.

**Puerperal Conditions.**—The number of deaths ascribed to accidents and diseases of pregnancy and childbirth, was 56, being equal to 4·1 per 1,000 births registered. Of the 56 deaths, 14 were due to puerperal sepsis, or 1·0 per 1,000 births, and 42, or 3·1 per 1,000 births, to other puerperal conditions. The corresponding rates for the fourth quarter of 1933 were 4·4, 2·2 and 2·2 respectively.

#### **Ages at Death.**

Of the total deaths at all ages registered during the quarter, 777 or 8·4 per cent. were those of infants under one year of age, and 4,369, or 47·5 per cent. were those of persons 65 years and upwards.

**Infant Mortality.**—The infant mortality rate was 57 per 1,000 births registered, as compared with 80, 58, and 56, respectively, for the three preceding quarters, and an average of 70 for the fourth quarter of the five years preceding (Table I).

For county boroughs and urban districts in the aggregate the rate was 73, and for all rural districts 48 per 1,000 births (Table III).

#### **Deaths in Public Institutions.**

Deaths in institutions numbered 2,726, or 29·6 per cent. of all deaths registered.

#### **Inquests.**

There were 309 inquests or deaths registered on Coroners' Certificates during the quarter, this number being 3·4 per cent. of the total deaths registered.

#### **Uncertified Deaths.**

The number of entries in which the cause of death was not stated to have been certified by a medical practitioner was 1,703, or 18·5 per cent. of the total deaths.

#### **Cases of Infectious Diseases Notified.**

Table VI gives the number of such cases notified during the quarter in urban and rural districts. The total number amounted to 2,015.

#### **Vaccination.**

As returned by the Registrars, the number of successful primary vaccinations during the quarter ended 31st December last was 7,415, or 54·5 per cent. of the births registered during the quarter, the corresponding rate for the fourth quarter of the five years 1929-33, being 61·9.

## CITY OF DUBLIN.

## BIRTHS.

Exclusive of 373 births in institutions of infants whose mothers were admitted from other localities, the number of births recorded for the City of Dublin during the quarter under review was 2,592. The annual rate represented thereby was 24.5 per 1,000 of the estimated population, as compared with a rate of 22.8 for the corresponding quarter of 1933. The total births registered (2,965) comprise 1,572 boys and 1,393 girls.

## DEATHS.

Omitting 199 deaths registered in the city relating to other localities, and including those of persons usually resident in the city who died elsewhere in Saorstát Éireann, the deaths for Dublin during the quarter numbered 1,371, equivalent to an annual rate of 12.9 per 1,000 of the population, as compared with 15.2 for the fourth quarter of 1933. The total number of deaths registered in the city was 1,541—755 males and 786 females.

## Causes of Death.

The following statement shows the number of deaths from some of the principal causes for the fourth quarter of 1934, as compared with 1933 :—

| CITY OF DUBLIN              |  |                      |                      |
|-----------------------------|--|----------------------|----------------------|
| CAUSE OF DEATH              |  | Fourth Quarter, 1934 | Fourth Quarter, 1933 |
| Principal Epidemic Diseases | Typhoid fever . . . .                              | 4                    | 3                    |
|                             | Typhus " . . . .                                   | .                    | .                    |
|                             | Small-pox . . . .                                  | .                    | .                    |
|                             | Measles . . . .                                    | 7                    | 1                    |
|                             | Scarlet fever . . . .                              | .                    | .                    |
|                             | Whooping-cough . . . .                             | 1                    | 6                    |
|                             | Diphtheria . . . .                                 | 11                   | 39                   |
|                             | Dysentery . . . .                                  | .                    | .                    |
|                             | Diarrhoea and enteritis (children under 2 years) } | 27                   | 40                   |
|                             | Influenza . . . .                                  | 8                    | 6                    |
| Pulmonary tuberculosis . .  |  | 122                  | 124                  |
| Other forms " . . . .       |  | 25                   | 39                   |

When compared with the figures for the fourth quarter of 1933, deaths from measles show an increase, the number being 6 above that for the same period of 1933; on the other hand deaths from whooping-cough, diphtheria, diarrhoea and enteritis of children under 2 years and tuberculous disease show decreases of 5, 28, 13 and 16, respectively, in comparison with the figures for the fourth quarter of 1933.

**Principal Epidemic Diseases.**—The deaths from this group of causes numbered 50, affording an annual rate of 0.5 per 1,000, being 0.3 below that for the fourth quarter of the preceding year.

**Tuberculosis.**—The deaths from all forms of tuberculous disease recorded for the city numbered 147, representing an annual rate of 1.39 per 1,000, as compared with 1.55 for the fourth quarter of the preceding year.

Of the 147 deaths, 122 were ascribed to pulmonary and 25 to other forms of the disease, the former representing a rate of 1.15 per 1,000, and the latter 0.24 per 1,000.

## Ages at Death.

Of the 1,371 deaths relating to the City of Dublin, registered during the quarter, 226 (or 16.5 per cent.) were those of children under five years of age, and 465 (or 33.9 per cent.) were of persons 65 years of age or upwards, the corresponding percentages in respect of the fourth quarter of 1933 being 19.2 and 32.5.

## Infant Mortality.

There were 176 deaths of infants under one year of age for the city, equivalent to a rate of 68 per 1,000 births. In the fourth quarter of 1933 the rate was 91.

## Deaths in Public Institutions.

The deaths of Dublin residents occurring in public institutions, registered during the quarter, numbered 669, or 48.8 per cent. of the total deaths.

## Cases of Infectious Disease.

The number of cases of infectious disease notified during the quarter, as shown in Table VI. was 595. Table VII gives the number of cases under treatment in Dublin hospitals during the quarter.

**METEOROLOGY.**

The mean temperature for the thirteen weeks ended 29th December, 1934, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 47.4°; at Cork (Roche's Point) it was 49.4°; at Peamount Sanatorium 46.9°; at Greenwich 48.1°; at Glasgow 45.5°, and at Edinburgh 45.3°.

The mean daily number of hours of bright sunshine recorded for the period at Dublin was 2.1; at Cork (Ballinacurra), 1.9; at Peamount Sanatorium, 1.9; at Greenwich, 1.3; at Glasgow, 1.2; and at Edinburgh, 1.9.

The rainfall during the same period measured at Dublin 8.39 inches; at Cork (Roche's Point), 13.23 inches; at Peamount Sanatorium, 8.89 inches; at Greenwich, 8.03 inches; at Glasgow, 10.04 inches; and at Edinburgh, 6.26 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London:—

**October.**

On the whole, the weather of October was wet and dull.

Mean temperature was rather variable, the deviation from the average ranging from - 0.8°F. at Mallarany to + 1.7°F. at Phoenix Park, Dublin. It was mainly mild until the 28th, except on the 15th, 16th and 23rd, but the last few days were unusually cold, with local sleet and snow on the 30th and 31st. The extreme temperatures were 65° F. at Trinity College, Dublin, on the 6th and 7th, at Balbriggan on the 11th, and at Rathfarnham on the 6th and 28° F. at Newtownforbes and Hazlehead on the 31st.

Rainfall exceeded the normal over the country generally, but it was rather variable; for instance, in the north-west, more than 150 per cent. of the normal occurred and over most of the south-east there was a deficiency. The percentage of the average ranged from 68 at Ballinacurra and 70 at Fitzwilliam Square, Dublin, to 168 at Delphi Lodge, Mayo. The 24th was excessively wet generally, 97 mm. being measured at Aasleagh (Mayo) and 79 mm. at Valentia (a record there for 24 hours).

Except at Ballinacurra, sunshine was deficient, the deficiency amounting to 28 hours at Valentia and 41 hours at Malin Head.

**November.**

The weather of November was distinguished by a marked deficiency of rainfall and a general scarcity of sunshine.

Mean temperature differed little from the average; apart from a mild spell around the 3rd the first part of the month was rather cold, but from the 20th onwards, mild conditions prevailed, though low minima were registered locally on the 29th.

The general precipitation amounted to about 50 per cent. of the average, the number of rain days also being fewer than usual. Sunshine aggregates fell below the average generally, the deficiency amounting to 26 hours at Phoenix Park, Dublin, and 20 hours at Birr Castle.

**December.**

From a meteorological standpoint, the weather of December was of unusual interest. It was phenomenally mild, excessively wet, and mainly dull.

The mildness of the month was very exceptional: the mean temperature at Phoenix Park, Dublin, 47.3° F., was the highest on record since at least before 1881. Mean pressure was everywhere abnormally low and southerly winds predominated.

Rainfall was not only very excessive (at Valentia, it was the wettest December on record), but unusually frequent: at some places in the west and south-west measurable rain was recorded on every day of the month.

Except in County Dublin, where Phoenix Park recorded an excess of 8 hours, sunshine was deficient, the deficiency amounting to as much as 59 per cent. of the average at Seskin, Carrick-on-Suir. December was thus the third consecutive dull month.

TABLE A.—Showing the Mean Weekly Values and the Differences from their Average Values of the METEOROLOGICAL ELEMENTS at Phoenix Park, Dublin, for the Thirteen Weeks ended December 29th, 1934.

| WEEK ENDED        | AIR PRESSURE.                    |                          | TEMPERATURE. |            |                 |                                     |          | HYGROMETER. |                   |                   | BRIGHT SUNSHINE. |                    | RAINFALL.*                          |                         |               | WIND.                               |                 |                                   |

\* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1934; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

## URBAN DISTRICTS.

TABLE IV.—BIRTHS AND DEATHS registered during the Quarter ended 31st December, 1934, relating to Urban Districts (including County Boroughs), and the number of Deaths from some of the principal causes (see Note on second page) ; also particulars of BIRTHS and DEATHS for BELFAST and LONDONDERRY.

**YEARLY SUMMARY**  
**OF**  
**MARRIAGES, BIRTHS AND DEATHS.**  
**Year 1934.**

---

*(Note—the figures are provisional—See Note on second page of Quarterly Return.)*

---

**GENERAL SUMMARY.**

The rate per 1,000 of the population represented by the **number of Marriages** (14,158) registered in Saorstát Éireann in 1934 was 4·7, being equal to that for 1933, and 0·2 above an average of 4·5 for the five years preceding.

The **Birth-rate** in Saorstát Éireann during the year, based on 57,841 births, was 19·2 per 1,000 of the estimated population; the rate for last year was also 19·2, the average rate for the five years 1929-33 being 19·4.

The birth-rate for the city of Dublin was 26·3 per 1,000; for the borough of Dún Laoghaire, 18·8; for the county borough of Cork, 23·4; for Limerick, 24·8; and for Waterford, 24·2.

For Northern Ireland the birth-rate was 19·8; for England and Wales, 14·8; and for Scotland, 18·0.

The rate for Belfast was 21·9; for Londonderry, 27·0; for London, 13·2; for Glasgow, 19·6; and for Edinburgh, 15·7.

The **rate** in respect of **Deaths** registered in Saorstát Éireann, numbering 39,112, was 13·0 per 1,000, as compared with 13·5 in 1933 and an average of 14·3 for the five years 1929-33.

The death-rate for the city of Dublin was 13·6 per 1,000; for the borough of Dún Laoghaire, 15·3; for Cork, 14·8; for Limerick, 13·4; and for Waterford, 13·8.

The corresponding death-rate for Northern Ireland was 13·7; for England and Wales, 11·8; and for Scotland, 12·9.

For Belfast the death-rate was 13·7; for Londonderry, 16·0; for London, 11·9; for Glasgow, 13·7; and for Edinburgh, 12·8.

The mortality rate represented by deaths in Saorstát Éireann from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) was 0·4 per 1,000, as compared with 0·5 in 1933 and an average of 0·5 for the previous five years.

The death-rate from **Influenza** was 0·2 per 1,000, which was 0·4 below that for 1933 and 0·3 below the average rate for the five years 1929-33.

Deaths from **Tuberculosis** (all forms) afforded a rate of 1·1 per 1,000, as compared with 1·2 in 1933, and an average of 1·3 for the preceding five years.

The rate for **Pulmonary Tuberculosis** was 0·9, being equal to that for 1933.

Deaths from **Puerperal Conditions** represent a rate of 4·4 per 1,000 births registered during the year (1·6 per 1,000 from puerperal sepsis and 2·8 per 1,000 from other puerperal conditions), as compared with 4·4 in 1933 and also an average of 4·4 for the five years 1929-33.

The **Infant Mortality** rate (deaths under one year of age per 1,000 births registered) was 63, the rate for the year 1933 being 65, and the average for the previous five years, 69.

---

The **estimated Population** in the middle of 1934 (3,013,000) shows an increase of approximately 41,000 as compared with the result of the Census taken in April, 1926, viz., 2,971,992. This increase represents the difference between the balance of migrants outwards to places out of Europe and not within the Mediterranean Sea, and the natural increase (excess of births over deaths).

As compared with 1933, the estimated population in 1934 shows an increase of 20,000.

During the year 1934 the **Natural Increase** was 18,729, as compared with 16,825 in 1933, and an average of 15,232 for the five years 1929-33.

**Emigrants** numbered 1,178, as against 975 in 1933, and an average of 8,097 for the five years 1929-33, while the number of **Immigrants** was 2,229, as compared with 3,192 in 1933, the average for the five years 1929-33 being 3,674.

### MARRIAGES.

The number of marriages registered in Saorstát Éireann during 1934 was 14,158, representing 4.7 per 1,000 of the estimated population. In the first quarter 3,244 were registered; in the second, 3,548; in the third, 3,937; and in the fourth, 3,429; affording rates per 1,000 of the population of 4.3, 4.7, 5.2, and 4.6, respectively (see Table I, page 87). Of the 14,158 marriages, 13,398 were celebrated according to the rites and ceremonies of the Catholic Church, representing 4.8 per 1,000 of the Catholic population; and there were 760 other marriages, equivalent to 3.4 per 1,000 of the population other than Catholic. The former rate is 0.2 above and the latter 0.7 per 1,000 below the average of the five years 1929-33.

### BIRTHS.

The births registered in 1934 numbered 57,841, being 29,832 of males and 28,009 of females, or 1,065 of the former to 1,000 of the latter, and represent a rate of 19.2 per 1,000 of the population, as against an annual average of 57,465 births and a rate of 19.4 per 1,000 for the five years, 1929-33.

The births recorded for **urban areas** amounted to 21,769 and for **rural areas** 36,072, the former being equivalent to 24.3 per 1,000 and the latter to 17.0, in comparison with the corresponding rates of 23.8 and 17.2 in 1933.

For the **twelve Principal Towns** in the aggregate the birth-rate was 25.3 per 1,000, as compared with 24.7 per 1,000 in the preceding year. The rate for the remaining urban districts was 21.0, as against 20.6 in 1933.

### DEATHS.

The deaths registered in Saorstát Éireann during the year 1934 numbered 39,112, consisting of 19,946 deaths of males and 19,166 of females, and are equivalent to a rate of 13.0 per 1,000 of the estimated population, as against 13.5 in 1933 and an average rate of 14.3 for the five years 1929-33. (Table I, page 87.)

The death-rate per 1,000 for all **urban districts** (the population of which is about 30 per cent. of Saorstát Éireann) was 13.7 and for all **rural districts** 12.7, as compared with 14.9 and 13.0, respectively, in 1933.

For the **twelve Principal Towns** in the aggregate the rate was 13.9, as compared with 15.2 in 1933.

The individual towns with their rates per 1,000 of population, arranged in order from the lowest to the highest, are as follows: Tralee, 11.7; Limerick, 13.4; Dublin, 13.6; Waterford, 13.8; Sligo, 14.3; Drogheda, 14.6; Cork, 14.8; Dundalk, 14.9; each of Dún Laoghaire and Kilkenny, 15.3; and each of Galway and Wexford, 15.5.

For the remaining urban districts (those with less than 10,000 population) the general death-rate in 1934 was 13.1, as against 14.0 in 1933.

### Causes of Death.

In Table II, page 88, the number of deaths from some of the principal causes is shown for the years 1929-34, with the rates represented thereby.

**Principal Epidemic Diseases.**—Deaths from these causes in 1934 are equivalent to 0.43 per 1,000 of the population, as compared with an average of 0.53 for the five years 1929-33.

When compared with the average for the five years previous, the number of deaths from typhus for the year 1934 shows a decrease of 3, from measles a decrease of 158, from whooping-cough a decrease of 14, from diphtheria a decrease of 22, and from diarrhoea and enteritis of children under 2 years a decrease of 95. Deaths from typhoid fever increased by 7 when compared with the average, and the number of deaths from scarlet fever shows an increase of 7.

Of the deaths from diphtheria, 340 in number, 169 were recorded for urban areas, including 75 for Dublin city, 25 for Cork county borough, and 16 for Limerick county borough.

Table 2 shows that the mortality from the principal epidemic diseases in the counties and county boroughs varied from 0.1 for Longford, and 0.2 for the counties of Carlow, Laoighis, Tipperary N.R., Mayo, Cavan and Donegal, to 1.1 for Waterford county borough, and 1.0 for Cork county borough.

The death-rate from these diseases for the twelve principal towns in the aggregate was 0.8 per 1,000, the rates fluctuating from 0.3 for Dún Laoghaire Boro' to 1.3 for Tralee. The 123 deaths from all causes for the latter town included 10 from whooping-cough, one from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years. (Table 3.)

**Influenza.**—The number of deaths registered from influenza was 667, as against an average of 1,438 during 1929-33, the respective annual rates being 0.22 and 0.49 per 1,000 of the population. The rate per 1,000 for the aggregate of cities or boroughs and urban districts was 0.1 and for rural districts 0.3.

Of the 667 deaths, 286 were registered in the first quarter, 214 in the second, 67 in the third, and 100 in the fourth.

The rates for counties and cities varied from 0.9 for Longford and 0.6 for each of Cork county borough and Donegal to 0.0 for Waterford county borough and 0.1 for each of Dublin county, City of Dublin, Kildare, Meath, Wexford, Limerick county borough, and Tipperary S.R.

**Tuberculosis.**—Deaths from all forms of this disease numbered 3,417, being equal to 1.1 per 1,000 of the population, as compared with an annual average of 3,758 and a rate of 1.3 for the five years 1929-33. Table 2 shows that the rates in 1934 varied from 1.7 for the city of Dublin and 1.6 for Cork county borough to 0.8 for the counties of Tipperary S.R., Leitrim and Roscommon.

For the aggregate of cities or boroughs and urban districts, the death-rate from tuberculosis was 1.5 per 1,000 of the population of these areas, as against 1.0 for all rural districts. The rate for the twelve principal towns was 1.6 per 1,000.

**Puerperal Conditions.**—The number of deaths attributed to accidents and diseases of pregnancy and childbirth was 256, affording a rate of 4.4 per 1,000 births registered, which is equal to the average rate for the preceding five years. (Table II, page 88.)

Of the 256 deaths, 92 were ascribed to puerperal sepsis, or 1.6 per 1,000 births, and 164 to other puerperal conditions, or 2.8 per 1,000.

From Table 2, which shows the mortality for counties and county boroughs and for urban and rural areas in the aggregate, it will be seen that the rates varied from 7.7 for the counties of Kilkenny and Offaly and 7.6 for Meath to 0.8 for Sligo county. There were no deaths from puerperal conditions registered for Waterford county borough.

The aggregate rate per 1,000 births for cities or boroughs and urban districts was 3.5; for rural districts, 5.0; for the twelve principal towns, 3.4; and for the urban districts under 10,000 population, 3.7 per 1,000 births.

### Ages at Death.

Of 39,112 deaths at all ages, 3,626 or 9·3 per cent., were those of infants under one year of age, and 17,873, or 45·7 per cent., were those of persons 65 years and upwards.

### Infant Mortality.

The **Infant Mortality** rate in 1934 was 63 per 1,000 births registered, as against 65 in 1933, and an average of 69 for the five years 1929-33. (Table I, page 87.)

Table 2, page 111, shows that for cities or boroughs and urban districts in the aggregate, the rate for infant mortality was 78 per 1,000 births and for rural districts 53.

### Deaths in Public Institutions.

Deaths in Institutions numbered 11,674, or 29·8 per cent. of all deaths registered, as compared with 29·0 per cent. in 1933.

### Inquests.

There were 1,223 inquests or deaths registered on Coroners' certificates during the year, or 3·1 per cent. of the total deaths registered; the percentage in 1933 was 3·0.

### Uncertified Deaths.

The number of deaths in which the cause was not stated to have been certified by a medical practitioner was 7,165, or 18·3 per cent. of the total deaths, as against a percentage of 18·8 in 1933.

### Vaccination.

As returned by the Registrars, the number of successful **primary** vaccinations during the year was 34,429, or 59·5 per cent. of the total births registered, the percentage for the year 1933 being 60·6.

---

## CITY OF DUBLIN.

---

### BIRTHS.

The number of births registered during 1934, exclusive of 1,513 occurring in institutions relating to other localities, was 11,140; the rate per 1,000 of the estimated population represented thereby was 26·3, as compared with 25·5 in 1933. The total births registered numbered 12,653, of which 6,614 were boys and 6,039 girls.

### DEATHS.

Omitting 888 deaths registered in the city relating to other localities, and including those of persons usually resident in Dublin who died elsewhere in Saorstát Éireann, the deaths ascribed to the city numbered 5,748, equivalent to a rate of 13·6 per 1,000 of the estimated population, as against 15·3 for the year 1933. The total number of deaths registered in the city was 6,552 (3,316 males and 3,236 females).

In Table 4 the number of deaths by age-periods recorded for each of the districts comprising the city is shown, together with information regarding deaths from some of the principal causes. *The mortality for these portions of the city is derived from figures partially corrected for deaths in institutions, for the year (52 weeks) ended the 29th December, 1934.*

## Causes of Death.

In the following statement is given the number of deaths from all causes by age-period, and from some of the principal causes recorded for the city of Dublin during the years 1933 and 1934, the latter by quarters, with the mortality per 1,000 of the estimated population for each of these years; also infant mortality, mean temperature, rainfall and sunshine.

\*Per 1,000 Births.

**CITY OF DUBLIN.—contd.**

**Principal Epidemic Diseases.**—It will be seen from the foregoing statement that the deaths from this group of causes numbered 314, affording a rate of 0·74 per 1,000 of the population as compared with 0·93 for the preceding year. When compared with the figures for 1933, decreases are shown in the mortality from measles, diphtheria, scarlet fever, and diarrhoea and enteritis of children under 2 years of age. In the case of typhoid fever the number of deaths increased from 9 to 11, and in the case of whooping-cough from 42 to 89.

**Influenza.**—Deaths from this cause for the city numbered 32, equivalent to 0·08 per 1,000 of the population, as compared with a total of 189 and a rate of 0·45 for the year 1933.

**Tuberculosis.**—The number of deaths from all forms of this disease was 714, representing 1·68 per 1,000 of the population, as compared with 1·76 for the preceding year.

Of the total, 570 were ascribed to pulmonary tuberculosis, or 1·34 per 1,000 of the population, and 144 to other forms of the disease, or 0·34 per 1,000. In 1933, the corresponding rates were 1·39 and 0·37.

**Ages at Death.**

Of 5,748 deaths at all ages 1,172 (or 20·4 per cent.) were those of children under 5 years of age, and 1,734 (or 30·2 per cent.) of persons 65 years of age or upwards, the corresponding percentages for 1933 being 21·2 and 30·0.

**Infant Mortality.**

There were 878 deaths of infants under one year of age recorded, representing a rate of 79 per 1,000 births, as compared with 83 in 1933. In Table 4 the rates for the respective districts of the city are shown.

**Deaths in Public Institutions.**

The deaths of Dublin residents which occurred in public institutions numbered 2,955, or 51·4 per cent. of the total deaths.

**Cases of Infectious Diseases.**

The number of cases of infectious diseases notified in the city during the year was 1,972, as shown in Table 5, while Table 6 gives the number of cases of certain diseases under treatment in Dublin hospitals during the same period.

TABLE 1.—MARRIAGES, BIRTHS AND DEATHS Registered during the Year ended 31st December, 1934, IN SAORSTÁT ÉIREANN, shown by PROVINCES AND COUNTIES, with Deaths from some of the Principal Causes, Inquest Cases, Deaths in Public Institutions; Uncertified Deaths; and the number of VACCINATIONS; also similar particulars regarding NORTHERN IRELAND.

\* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1934; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

[illegible]

\* For populations and density per acre, see Table IV, page 90.

† Including all deaths registered on Coroners' certificates.

† The rates for Saorstát Éireann, the City of Dublin, and the Borough of Dún Laoghaire are calculated on the estimated populations in the middle of 1931.

TABLE 4.—Showing for the Year 1934 (52 weeks) ended, 29th December, 1934, the mortality from All Causes and from some of the Principal Causes of Residents of the several REGISTRARS' DISTRICTS comprising the CITIES OF DUBLIN AND CORK,\* also the Deaths at certain age periods, and the number of Uncertified Deaths.

NOTE.—See note at heading of Table V, page 92.

| REGISTRARS' DISTRICTS, &c. |  | Infant MOR- TALITY PER 1,000 BIRTHS. | ANNUAL RATE OF MORTALITY PER 1,000 LIVING* REPRESENTED BY DEATHS |                                  | AGES AT DEATH |                |                |                |                |                 |                  |                  |                  |                 | DEATHS FROM                  |                               |          |                |                 |            |                 |                          |                                 |           | In Public Institutions. | Number of Uncertified Deaths. |              |                |            |              |         |            |        |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |     |
